## Jelly Bean Strain | Regular Photoperiod Seeds

**Best to Grow**

**Indoor / Outdoor**

### Jilly Bean Strain Grow Info

If you have never even grown marijuana, you can grow Jelly Bean strain seeds with ease. If you opt to grow this exotic marijuana strain outside, make sure there is no frost at night before planting your germinated seeds. The Jelly Bean marijuana strain thrives in dry and warm climates and is usually ready to chop by the end of October.

The yield is around 10 ounces or more per s/m planted inside. This strain like all cannabis plants needs lots of air moving over the canopy, so invest in quality grow room fans. It will grow tall so consider topping and plant training to tame this beast of a plant.

### What Can I Expect from smoking Jilly Bean Strain?

Soon after smoking the Jelly Bean strain, you may experience a case of “the giggles”, especially when smoking with friends. It will enhance your mood immediately and put a huge smile on your face. Once the high evolves, you will feel invigorated and energized for the upcoming day. The effects(high) can last for several hours, and along with it the boost in energy. If you can handle the high potency and hold in the giggles, you can use it as a daytime pick-me-up.
